EDUCATION

University of Illinois at Chicago (UIC) **Chicago, IL**
Bachelor of Science in Data Science and Finance *January 2023- December 2026*

- Cumulative GPA: 3.52/4.00 | Dean's List
- Relevant Coursework: Artificial Intelligence (RAG), Machine Learning, Big Data, Databases, Data Mining, Statistical Computing (R), Econometrics, Time Series, Data Science for Business, Corporate Finance, Investments, Portfolio Management

PROFESSIONAL EXPERIENCES

mHUB Ventures **Chicago, IL**
AI Product and Data Systems Intern *June 2026 – Present*

- Built a GenAI data-enrichment pipeline (Python, Supabase, Claude API, n8n) for mHUB's 2027 Energy Tech Accelerator: every generated claim in a company profile must trace to a source field or fail validation before render, and web-sourced URLs pass two-stage verification. Cut the accelerator team's research time ~70%; 70+ profiles filed to SharePoint; 64 offline tests passing.
- Built a two-stage contractor–client matching pipeline over 200+ records: deterministic SQL rules decide eligibility, then an LLM judges fit among at most 45 qualified candidates; built the survey-to-database write path with email-keyed, newer-wins upserts..
- Ran a data-readiness audit across five business units (incubator, accelerator, HD Services, marketing, philanthropy) and designed the AI knowledge-corpus strategy; presented findings and a stakeholder value matrix to leadership.

Chicago Tech Circle **Chicago, IL**
Applied AI Intern *March 2026 – June2026*

- Designed an end-to-end AI job matching pipeline for early-career job seekers, engineered LLM prompts and adversarial guardrails across 5 iteration cycles, integrated Gemini and Adzuna APIs, and shipped as a solo build in under one week.
- Built reusable prompt libraries, API/tool integrations, and human-in-the-loop approval gates; instrumented LLM outputs with evaluation and QA checks to ensure reliability and auditability before deployment. Authored SOPs and technical documentation so automations survived and improved after handoff.

University of Illinois at Chicago - College of Business Administration **Chicago,IL**
Teaching Assistant : Data + AI (Google.org funded pilot) *August 2025 – May 2026*

- Helped 175+ students become workforce-ready with hands-on instruction on production AI tools (n8n, Cursor, Claude Code), bridging technical skills with practical business applications across multiple majors. Codified scalable best practices for responsible AI deployment, bias mitigation, and prompt engineering.

UIC Innovation Centre **Chicago, IL**
Research Assistant - HAL Lab by Apple *January 2026 – August 2026*

- Built CampusCare, an iOS/SwiftUI health-insurance literacy chatbot grounded on a curated 74-fact corpus; implemented a fenced distress-handling path where the LLM classifies but responses are limited to pre-approved fixed strings, removing improvisation from the safety-critical path. Delivered handoff documentation and established the team's PR workflow.

Portfolio Management Team - UIC Business **Chicago, IL**
Financial Analyst *September 2024 – April 2025*

- Built Python and Excel-based valuation models (3-statement, DCF/comps, scenario & sensitivity analysis) on Financials sector equities; conducted 10-K/10-Q deep dives and macro trend analysis to surface high-conviction, data-driven investment ideas.

LEADERSHIP EXPERIENCES

Collegiate Entrepreneurs Organization (CEO) at UIC **Chicago, IL**
President *January 2025 – Present*

- Grew active membership 150% to 70 students across 20 majors; established partnerships with founders of multi-million-dollar startups that converted into 5 member hires..

PROJECTS

Mandate Guard: Payment Authorization Controls for AI Agents (2026)

- Built a 7-rule deterministic gate (no LLM in the decision path) that blocks agent purchases outside a user's mandate; every decision is written to an append-only, hash-chained evidence ledger exportable as PDF/JSON for disputes. 372 tests; confirmed in a live payment sandbox run. Built solo at the Prava x Devfolio hackathon (Visa and OpenAI judges)

Cybersecurity Risk Scoring - NDA company (Fall 2026, in progress)

- Building a composite risk score across five security signals, surfaced in a real-time Power BI dashboard (UIC industry project); focus on the data model and on tracing each score back to its inputs.

CEO Pay Sensitivity & Industry Competition (Fall 2025)

- Engineered a dataset of executive pay + market data, computed HHI by SIC to model competition, and ran OLS with HAC errors to address heteroscedasticity/autocorrelation; built quarterly trend dashboards and an audit-ready assumptions log (methods, data lineage, QA steps) using Python (pandas, statsmodels) and SQL.

PPP Loan Forgiveness Threshold Effects on Small Business Survival (Spring 2026)

- Measured the causal impact of a policy threshold on 880K+ records in R - isolating true effect from selection and confounding, the same identification problem as marketing incrementality and lift testing, using sharp/covariate RDD, triangular-kernel regression, and a McCrary density test to validate the design.

PROFESSIONAL SKILLS

Languages: English, Hindi, and French (DELF A2)
Technical skills : Python (pandas, NumPy, SciPy, scikit-learn, statsmodels), SQL, R, n8n, GenAI (Claude API, Claude Code, Gemini API), Prompt Engineering, Model Evaluation, Regression & Time Series, Causal Inference, Machine Learning, Data Mining, Feature Engineering, Databases (Supabase, AWS, Databricks), Data Visualization, Financial Data Analysis, Excel.
